

Bin Wash

Deodorizes and Sanitizes

Fact Sheet

Introduction

Household garbage and trash bins are a haven for germs, pests and bacteria – the main cause for odor problems. If wheelie bins are left unclean they are a health and hygiene hazard, and emit unpleasant odors.

Typical methods, such as simply hosing bins out with water does not remove odors and bacteria, and impacts on water conservation and the environment. Bins need cleaning maintenance and should be both deodorized and sanitized.

Solving the problem of dirty, smelling and unhygienic wheelie bins can be achieved with BiOWiSH™ Bin Wash which provides a cost effective, productive, affordable and environmentally friendly way to clean a wheelie bin.

Why does the Wheelie Bin smell?

The reason a wheelie bin smells is because of the bacteria that are thriving in the bin which live on garbage that has been put in it. To deodorize and sanitize the bin it is important to remove both the bacteria and the deposits of waste matter they live on. Simply by hosing out the bin will not eliminate the smell. Once the bin starts to smell it is a health and hygiene hazard.

Why should you clean your Wheelie Bin every 4 weeks?

There are many diseases around and in your bin to be wary of which include: *Tuberculosis, Weils, disease from rodents, Salmonella, E.Coli, Listeria* and many more that can start to grow within hours of discarding waste into the bin. By regularly cleaning your bin remains in a clean and hygienic state.

Did you know.....?

In many regions it is illegal to clean your wheelie bin simply by hosing and allowing the waste water to run off into the gutter or onto the road? By doing this you are creating storm water pollution which is an offence under the local regulations.

As BiOWiSH™ Bin Wash does not contain any detergents, phosphorus sources, chemicals and because it digests or decomposes the wastes it washes from your bin, the waste water can be safely spread on lawns or garden areas.

Benefits of cleaning with BiOWiSH™ Bin Wash

- Keeps bins clean and odor free without the use of harsh chemicals
- Removes rather than masks odors
- Reduces harmful pathogenic bacteria and fungus
- Reduces the compounds that attract insects and rodents
- Reduces hygiene hazards, protecting your home & health
- Stops bins being and looking dirty
- 100% organic, biodegradable
- Non-toxic, non-chemical, non-pathogenic
- Harmless to humans and the environment

Instructions for Use

1. Open foil satchet
2. Insert filter bag in up to 5 litres / 1.5 gal of cool to warm water. Do not use hot water as it neutralizes the enzymes.
3. Spray, splash or brush the solution thoroughly over all the bin surfaces. A brush works well for this.
4. As BiOWiSH™ Bin Wash does not contain any detergents, phosphorus sources, chemicals, and because it fully digests or decomposes the wastes it washes from your bin, the waste water can be safely spread on lawns or garden areas.
5. Minimal rinsing is required. Please conserve water and allow bin to dry naturally in sunny area.
6. Repeat monthly or as required.
7. Filter bag makes for excellent composting which is beneficial for the environment, so please dispose of accordingly.
8. Register for your free reminder at www.biowishtechnologies.com/reminders

How can you maintain your Bin in a clean and hygienic state?

By regularly cleaning your bin every 4 weeks with BiOWiSH™ Bin Wash you are maintaining the hygiene of your bin and decreasing the chances of your bin being a source of germs and bacteria.

You may also consider helping the environment further and composting your organic waste. By keeping this out of your waste bin your bin will remain free of rotting matter. For effective and easy home composting please ask your retailer for BiOWiSH™ Compost Boost.
